

User List View Search Button Flow:

1. User List View me input field banai, jisme input type text aur name="firstName" diya.
2. Ek input type me submit banaya jiska name="operation" rakha aur value="UserListCtl.OP_SEARCH" diya.
3. Request UserListCtl ki doPost method pr gai.
4. Request parameters ko UserBean me populateBean method se populate karwaya.
5. operation ko get kiya, aur operation mila search .
6. Agar operation == search ho, to pageNo ko 1 set kiya.
7. User Model ka object banaya.
8. Model ki search method ko call kiya, jisme UserBean , pageNo , aur pageSize ko pass kiya.
9. search method ne list return ki, jise list object me hold kiya.
10. Servlet utility ki setList method ka use karke list ko request object me set kiya.
11. Servlet utility ki setPageNo method se pageNo ko request object me set kiya.
12. Servlet utility ki setPageSize method ka use karke pageSize ko request object me set kiya.
13. Finally, Servlet utility ki forward method ka use karke request aur response ko UserListView pr forward kiya.
