

User List View Dynamic Preload (Role) Flow:

1. `UserListCtl` pr `BaseCtl` ki `preload` method ko override kiya.
2. `RoleModel` ka object banaya.
3. `RoleModel` ki `list` method ko call kiya, return list mili, jise `List` type ke variable `roleList` me hold kiya.
4. `req.setAttribute("roleList", roleList)` kiya taaki list ko request object me set kiya ja sake.
5. `UserListView` me `req.getAttribute("roleList")` kiya, aur list ko `List` type ke variable `roleList` me hold kiya.
6. Expression tag me `HtmlUtility` ki `getList` method ko use kiya, jisme `name` , `selectedValue` , aur list ka object `roleList` pass kiya.
